

## **Construction and Desludging at Wastewater Treatment Plant in Aylesford**

**June 20, 2025**

There will be an increase in truck traffic travelling to and from the Wastewater Treatment Plant in Aylesford for the next three weeks.

Municipal staff are working with GFL Environmental to complete important preventative maintenance work at the Maple Avenue treatment facility. The scope of this work will include the construction of an access road and dewatering pad and dredging and dewatering sludge from both treatment lagoons.

Due to the nature of this work, it is possible there will be a temporary increase in odour or noise near the construction and desludging sites. The sludge removal operations are scheduled to occur during the day from Monday to Saturday.

Preventative sludge removal helps keep the Wastewater Treatment Plant working – and smelling – properly. The Municipality of the County of Kings appreciates the community's patience and understanding while this important maintenance work is underway.
