

Silencer to be Installed at Hants Border Wastewater Treatment Plant this Week

Sept. 17, 2025

The Municipality of the County of Kings will start installing a custom silencer at the Hants Border Wastewater Treatment Plant this week.

The silencer was ordered to reduce noise and vibration coming from the blower equipment used to combat odour. The Municipality is also installing larger electrical motors and blower belts/pulleys to improve airflow within the lagoons. These equipment upgrades will boost dissolved oxygen levels and strengthen the biological systems that break down materials contributing to odour.

Every effort is being made to improve Plant performance as soon as possible. Crews are working diligently to install the new equipment that is specifically designed to address noise and odour.
