

Noise Reduction Efforts Successful at Hants Border Wastewater Treatment Plant

Sept. 29, 2025

The Municipality of the County of Kings recently installed silencer equipment to address concerns about excessive noise at the Hants Border Wastewater Treatment Plant.

Crews installed a custom-ordered silencer at the Plant on Sept. 17. The silencer is reducing noise and vibration coming from blower equipment that was installed to combat spikes in odour noted in the spring and summer.

The Municipality apologizes for the delayed arrival of the custom-ordered noise-reduction solution and thanks community members for their patience and understanding as crews worked to resolve concerns about noise and odour.

In addition to the silencer, a new motor and pulleys were recently installed to improve airflow in the lagoons and strengthen the biological systems that break down materials contributing to odour.

The Municipality will continue to work to improve Plant performance on an ongoing basis.
