

Check Before You Dig

Planning to do some digging soon? There is a free service in the Municipality of the County of Kings that can help you locate infrastructure hidden underground before you dig.

Checking before you dig can prevent costly and disruptive damages to underground assets, such as gas lines, water/sewer piping or telecommunication/electrical cables. Residents and companies planning a dig in the Municipality of the County of Kings can now use the online Info Excavation tool to place a site-specific "locate request" to check for infrastructure buried on a property prior to digging.
